

LIFT TO LOAD      PRESS TO READ  
FILM      PATH

ROTATE      IMAGE

Film goes under rollers and between glass plates.

TAKE UP REEL DO NOT REMOVE

The central mechanism of the microfilm reader is housed in a dark blue base. It includes a film path with rollers and a central lens assembly. A blue reel is mounted on the right side. A control panel with a 'ROTATE' and 'IMAGE' knob is positioned in front of the lens. A white label with black text is attached to the blue reel. The entire unit is mounted on a light-colored shelf.
