Note: Our Solutions online databases use the AccessiBe automated web accessibility solution, an AI-based application that runs in the background and optimizes our accessibility level constantly. To ensure that we adhere as strictly as possible to the W3C Web Content Accessibility Guidelines 2.1 at the AA level, the application remediates the sites' HTML, adapts its functionality and behavior or screen-readers, and for keyboard functions used by individuals with motor impairments.

Accessibility features are managed by accessing the admin section of the database. The default setting is disabled.

Evaluation Methods Used: Automated accessibility testing for WCAG 2.1 compliance by AccessiBe, manual keyboard-only testing in version 90 of Chrome Edge version 90 and version 88 of Firefox.

Applicable Standards/Guidelines

This report covers the degree of conformance for the following accessibility standard/guidelines:

Standard/Guideline	Included In Report
Web Content Accessibility Guidelines 2.0	Level A (Yes / No) Level AA (Yes / No) Level AAA (Yes / No)

Legal Disclaimer

We firmly believe that the Internet should be available and accessible to anyone and are committed to providing a website that is accessible to the widest possible audience, regardless of circumstance and ability.

To fulfill this goal, we aim to adhere as strictly as possible to the World Wide Web Consortium's (W3C) Web Content Accessibility Guidelines 2.1 (WCAG 2.1) at the AA level.

Our websites utilizes various technologies that are meant to make it as accessible as possible at all times. We utilize an accessibility interface that allows persons with specific disabilities to adjust the website's UI (user interface) for their personal needs.

Additionally, the website utilizes an AI-based application that runs in the background and optimizes its accessibility level constantly. This application remediates the website's HTML, adapts its functionality and behavior for screen-readers used by blind and visually impaired users and for keyboard functions used by individuals with motor impairments.

We aim to support the widest array of browsers and assistive technologies possible, so our users can choose the best fitting tools for them, with as few limitations as possible. Therefore, we have worked very hard to be able to support the major systems that comprise over 95% of the user market share, including Google Chrome, Mozilla Firefox, Apple Safari, Opera and Microsoft Edge, JAWS, and NVDA (screen readers), both for Windows and for MAC users.

Despite our very best efforts to allow anybody to adjust the website to their needs, there may still be pages or sections that are not fully accessible, are in the process of becoming accessible, or are lacking an adequate technological solution to make them accessible. We are continually improving our accessibility, adding, updating, and improving options and features, and developing and adopting new technologies. All of this is meant to reach the optimal level of accessibility, following technological advancements.
